

IWT Challenge Fund Logframe:

IWT Challenge Fund has its own fund-level logframe. When projects select, use and report progress using the core IWT Challenge Fund Standard Indicators, we can combine this data to track the progress towards our fund-level outputs, outcome and impact. Using the cumulative data from projects to monitor our progress, we can develop ambitious evidence-based milestones and targets, show decision-makers our impact and continue to build a strong case to secure future funding.

Indicator and reporting requirements implemented in 2024/25 Reporting period. Initial efforts to disaggregate have been limited so reporting on this will be challenging as we work with projects to improve things. No target set for proportion of projects assessed to be at GESI-sensitive as baseline</p>

	assessment conducted in Year 1 of GESI Action Plan. Results represented here (for proportion of projects assessed to be at GESI-sensitive) are based on reviewer's scores of all Annual Reports submitted by mid-September 2024. It should be noted that as this is a pilot phase, there has been variance in how reviewers have responded to the GESI scaling question both across reviews and across schemes and the figures here represent general trends rather than absolute ratings of where project's sit on the scale. These figures will be used to inform the targets for next year and we will seek to further standardise the process following the pilot phase
